The digital RMF-112D unit is part of DEIF’s complete range of relays for generator protection and control.

Applied for protection against under-frequency and over-frequency by supervising the frequency (of generators) in single-phase and 3-phase networks, RMF-112D is applicable for installations with a number of adjustable parameters.

**Frequency Relay, RMF-112D**

Protect your generator against under- & over-frequency

**RMF-112D features**

► Combined under-frequency/over-frequency
► For 1- and 3-phase networks
► LED indication of fault condition
► Timer-controlled tripping
► LED indication for activated relay
► 35 mm DIN rail or base mounting

**RMF-112D type approvals**
