The digital RMF unit is part of DEIF’s complete range of relays for generator protection and control.

Applied for protection against under-frequency and over-frequency by supervising the frequency (of generators) in single-phase and 3-phase networks, RMF is applicable for installations with a number of adjustable parameters.

**RMF-112D features**

- Combined under-frequency/over-frequency
- For 1- and 3-phase networks
- LED indication of fault condition
- Timer-controlled tripping
- LED indication for activated relay
- 35 mm DIN rail or base mounting
