

AC Current Single Function Transducer, TAC-311DG

Measuring transducers for current

Powerful, fast and compact, the units in DEIF's transducer range measure sinusoidal alternating voltage and/or current signal and provide output signal as direct current or voltage signal proportional to measurements for PLCs, PCs, microprocessor control, indicators, alarm units etc.

TAC transducers are compact, single function transducers for measurement of a sinusoidal AC current converted into a DC current or voltage signal proportional to the measured value on a single-phase network.

TAC-311DG features

- ▶ Measures current on AC networks
- ▶ Compact design, 55 × 75 mm
- ▶ Easily accessible terminals
- ▶ Easy identification of unit/function
- ▶ Accuracy class: 0.5
- ▶ 35 mm DIN rail or base mounting

TAC-311DG type approval
