Multi-transducer, MTR-3
Cost-effective measurement of more than 50 parameters

The size of a portable hard drive, the MTR-3 transducers are slight in size but each one offers equal performance of up to four standard transducers, measuring and calculating AC voltage, AC current, active/reactive/apparent power, power factor, frequency, kWh, kvar, THD, dynamic and maximum demands.

The range has a standard response time of less than 200 ms, with the MTR-3F offering ultra-fast response at just ≤50 ms. Modbus data refresh time is also just 50 ms with transfer data up to 115,200 bit/s. The accuracy class is 0.5 for analogue data and 0.3 for Modbus data. With configurable outputs for more than 50 parameters and a universal power supply (19-300 V DC, 40-276 V AC), it is possible to stock DEIF’s transducers with future installations and reconfiguration for almost any application in view.

DEIF’s MTR-3 is a cost-effective, compact and powerful solution for transducer applications. Developed for measuring single-phase and 3-phase network topologies, measurement data are available through RS-485 Modbus communication. Simply connect a USB 2.0 interface for fast and easy configuration of up to four analogue outputs.

### MTR-3 features
- Suitable for all 1- and 3-phase network topologies
- Up to 1000 VL-L AC input
- Accuracy class: 0.5 or 0.3
- Up to 4 analogue outputs
- Fast response time, down to ≤ 50 ms
- Measures more than 50 parameters
- RS-485 serial Modbus communication
- Fully configurable by USB, no aux. supply required
- Universal power supply of 19 to 300 V DC/40 to 276 V AC
